

2-12 Solve Two-Step Problems Involving Addition and Subtraction

Learning goal: I can solve two-step word problems by drawing bar diagrams and writing an equation with a letter for each unknown.

Textbook: pages 79–82. The book solves Lea's points problem in two steps: $235 + 112 = a$, then $475 - 347 = b$.

Words to Know

two-step problem	A word problem that needs two equations to solve.
unknown	The number we do not know yet.
letter for the unknown	A letter like a or b that stands for the unknown number: $246 + 131 = a$.
bar diagram	Bars that show the parts and the whole. A dashed bracket shows the unknown.
equation	A number sentence with an equal sign, like $500 - 377 = b$.

How to Teach It

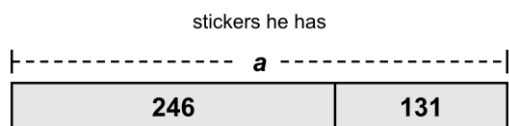

1. Read the problem. Ask, "What do we know? What do we need to find?"
2. **Step 1:** find the hidden number first (often a total). Draw a bar diagram and write an equation with a letter.
3. **Step 2:** use the Step 1 answer to answer the question. Draw a second diagram and equation with a new letter.
4. Letters can be on either side of the equal sign: $812 = 345 + k$ means the same as $345 + k = 812$.
5. Check that the answer makes sense and that you answered the question that was asked.

Tip: Watch for stopping after one step, and for "more than" stories: "Raj has 128 more than Kim" means Raj has Kim's amount plus 128.

Worked Examples

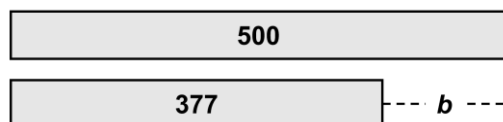

Example 1: Step 1, find the total

Max has 246 stickers and gets 131 more. He needs 500 to fill his album. How many more does he need?

$$246 + 131 = a, \text{ so } a = 377$$

Example 2: Step 2, compare with what is needed

$500 - 377 = b$, so $b = 123$. Max needs 123 more stickers.

Example 3: Spend two times

Ben has \$215. He spends \$148 and then \$19. How much is left?

$215 - 148 = c$, $c = 67$. $67 - 19 = d$, $d = 48$. Ben has \$48 left.

Example 4: "More than," then together

Kim has 215 shells. Raj has 128 more than Kim. How many do they have together?

$215 + 128 = r$, $r = 343$ (Raj). $215 + 343 = t$, $t = 558$.

Skills Checklist *Check off each skill your child can do without help.*

- | | |
|--|--|
| ☐ Write an equation for a bar diagram. | ☐ Solve two-step add-then-subtract problems. |
| ☐ Draw a bar diagram for an equation. | ☐ Solve "more than" and "spend two times" problems. |
| ☐ Use a letter for an unknown on either side of $=$. | ☐ Work backward from what is left. |

2-12 Solve Two-Step Problems Involving Addition and Subtraction

Name _____ Date _____

Together *Work with your grown-up. Talk about each step.*

- A.** Write an equation for the bar diagram. Then solve.

Equation: _____

a = _____

- B.** A class collected 276 cans one week and 418 cans the next week. They gave 350 cans to a food bank. How many cans are left? Write an equation with a letter for each step.

Step 1: _____

Step 2: _____

Cans left: _____

- C.** Draw a bar diagram for the equation. Then find b.

$$702 - b = 354$$

b = _____

On My Own Try these by yourself. Show your work.

1. Write an equation for the bar diagram. Solve.

Equation: _____

a = _____

2. Write an equation for the bar diagram. Solve.

Equation: _____

b = _____

3. Draw a bar diagram for the equation. Solve.

$$803 - b = 347$$

4. Draw a bar diagram for the equation. Solve.

$$300 + a = 820$$

b = _____

a = _____

5. Together, Lena and Max biked 326 miles in May and 488 miles in June. Lena biked 439 of the miles. How many miles did Max bike? Use letters for the unknowns.

Max biked: _____

6. Jo has \$164. She buys a game for \$118 and a book for \$27. How much money does she have left?

Money left: _____

7. Ana has 214 stamps. Leo has 165 more stamps than Ana. How many stamps do they have together?

Stamps together: _____

8. Solve for the unknown.

$$m = 674 - 352$$

9. Solve for the unknown.

$$905 = 467 + k$$

$$m = \underline{\hspace{2cm}}$$

$$k = \underline{\hspace{2cm}}$$

10. A juice stand made 263 cups of juice in the morning and some more in the afternoon. It sold 512 cups, and 46 cups were left. How many cups did it make in the afternoon?

Afternoon cups: _____

11. A store has 9 boxes of crayons. Each box has 100 crayons. The store sells 3 boxes on Monday and 4 boxes on Tuesday. How many crayons are left to sell?

Crayons left: _____

12. Write a two-step word problem that this bar diagram could show. Then find t .

208	315	146
-----	-----	-----

└----- t -----┘

$$t = \underline{\hspace{2cm}}$$

2-12 Solve Two-Step Problems Involving Addition and Subtraction

Together

A	$320 + 455 = a$. a = 775
B	Step 1: $276 + 418 = a$, $a = 694$. Step 2: $694 - 350 = b$, b = 344 cans left. <i>Any letters are fine. Watch for stopping at 694.</i>
C	Whole bar 702; parts 354 and b. b = 348 <i>Accept any diagram that shows 702 as the whole and 354 and b as the parts.</i>

On My Own

1	$280 + 435 = a$. a = 715
2	$836 - 609 = b$ (or $609 + b = 836$). b = 227
3	Whole 803; parts 347 and b. b = 456 <i>Items 3–4: accept any correct part-part-whole or compare diagram.</i>
4	Whole 820; parts 300 and a. a = 520
5	$326 + 488 = a$, $a = 814$. $814 - 439 = b$, b = 375 miles.
6	$164 - 118 = c$, $c = 46$. $46 - 27 = d$, d = \$19 . <i>Also accept $118 + 27 = 145$, then $164 - 145 = 19$.</i>
7	$214 + 165 = L$, $L = 379$ (Leo). $214 + 379 = t$, t = 593 stamps. <i>A common mistake is $214 + 165 = 379$ as the final answer.</i>
8	m = 322
9	k = 438 <i>$467 + k = 905$: count up $467 \rightarrow 500 (+33) \rightarrow 905 (+405) = 438$.</i>
10	$512 + 46 = c$, $c = 558$ cups made in all. $558 - 263 = a$, a = 295 cups. <i>Work backward: sold + left = everything made.</i>
11	9 boxes = 900 crayons. $900 - 300 - 400 = 200$ crayons. <i>Also accept $9 - 3 - 4 = 2$ boxes = 200 crayons. The answer must be in crayons, not boxes.</i>
12	Sample: "A farm picked 208 apples on Monday and 315 on Tuesday. On Wednesday it picked 146 more. How many apples did it pick in all?" $208 + 315 = a$, $a = 523$; $523 + 146 = t$, t = 669 <i>Accept any two-step story that joins the three amounts.</i>
